

Amendments to the Specification

Please amend the following paragraphs:

[03] One such game is described in U.S. Patent 4,207,087 to Morrison et al. and is directed to the well known pattern matching game "~~Simon~~ **SIMON**" that is manufactured by Milton Bradley. The '087 patent is directed to a game that includes a plurality of push-button switches, each associated with a tone or light, or both. The device generates a sequence of tones and lights associated with different push-button switches on the game. The generated sequence of events must be repeated by a participant by depressing the proper push-button switches. If the participant correctly repeats the sequence, the machine adds another entry to the sequence and plays the lengthened sequence which must again be repeated by the participant. This process may be repeated until a predetermined lengthened sequence is met or the participant makes an error.
